Dimming Control Wiring Diagrams

➤ Push-dim 0-100% dimming control

By pressing the push button for less than one second the LEDs turn on or off.
By pressing the push button for more than one second the light intensity of the LEDs is dimmed according to the following modalities:

- ✧ If the light intensity is not at maximum, by pressing the key there will be an increase of this to maximum or to the corresponding level at the moment the key is released;
- ✧ A further pressure on the key inverts the dimming direction to the minimum value or to the corresponding level at the moment the key is released;
- ✧ If light intensity is at maximum by pressing the key there will be a decrease to the minimum value or to the corresponding level at the moment the key is released.

Total length of PUSH cables <20m. Factory dimming setting at 100%.

Note: Only use self-reset push button without indicator light.

Risk of short circuit. The self-reset button can only be linked between the Push-dim and the L(AC).

Do Not connect the self-reset button to the N(AC)

➤ On/Off sectional dimming control

➤ Synchronization dimming control

W1:

W2:

The lights driver by LNX units(slaves) can be dimmed synchronously through a LNX unit(master) directly controlled via IR remote control, 0/1 - 10V, 10V PWM, DALI, Push-dim, On/Off sectional dimming control function.

Wiring diagram as shown on the right note the following:

- ✧ According SYNC instructions on wiring housing wiring distinguish SYNC + and -;
- ✧ Max. number of the LNX units, 10 (1 master + 9 Slaves);
- ✧ Max. cable length between each units, 20m (based on a cable with cross-section of 0.15mm² - 0.3mm²);
- ✧ Don not connect dimming circuit to slaves.
- ✧ Please make sure all units are set to 100% dimming setting (factory default) before synchronizing.

SPEC SHEET

✧ DALI interface dimming control

LND series of LED dimming driver; in line with DALI protocol specification IEC62386, acceptable compliance with ON / OFF, scenes and dimming DALI controller instruction norms issued.

Each DALI subnets can only have a maximum of 64 DALI slave devices (DALI LED dimming drivers).

Each DALI LED dimming drivers will consume 2mA control terminal of the current.

DALI connections of up to 300 m can be made with any 2 wire 0.5 - 1.5 mm² mains rated cable.

DALI cable must be mains-rated and the maximum voltage drop along the length of the cable must not exceed 2V.

In rare instances where the environment may be electrically noisy, due to adjacent circuits carrying high switching currents, we recommend a 2 wire twisted pair screened and sheathed cable.
