## LND127 Smart E-Dim Dali DRIVER

SPEC SHEET

27W 3-62V 180-900mA Dali Dim  
LND127  
613127

**SELV RoHS**

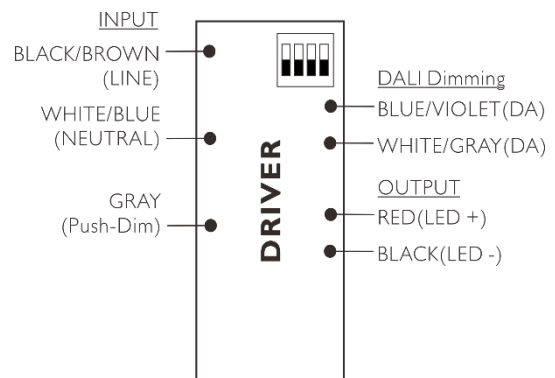

### Features

- Multilevel current output, Constant current output 180-900mA
- Multi-power driver supplied with dip-switch for the selection of the output current
- DALI digital dimming control interface, compatible with standard (IEC 62386) DALI interfaces.
- Memory function for sets or light groups. Recall of stored functions.
- Dimming range from 0 -100%, LED start at 0.1% possible.
- PUSH-Dim, dimming and switching via push-button with memory function.
- Universal AC input (90~265Vac)
- Designed for LED lighting applications
- UL Class 2 output, Class 2 protection against electric shock for direct or indirect contact
- Supplied with terminal cover and cable retainer.
- Driver can be secured with slot for screws.
- Can be switched on and off on secondary circuit for power LED.
- Protections: Short circuit , Over voltage, Over Current
- 5 year warranty

### Benefits

- Enables design of low profile and compact fixtures
- Helps to maximize energy savings and allows application specific light levels
- Supports majority of available dimming solutions

### Wire Diagram

#### **Note:**

Install in accordance with National and Local Electrical Codes.

Use 16-24 AWG solid copper wire rated  $\geq 300V/85^{\circ}C$ .

Strip wire 3/8".

Please pay special attention to wiring installation guidelines, Wrong wiring will cause damage to the LED driver.

Before connection the power, make sure you have access to the LED load.

#### Dimming Control Wiring Diagrams

##### ➤ On/Off sectional dimming control

LNA, LND Series LED dimming driver support segmented dimming, sectional dimming only need to use the standard ON / OFF wall switch can easily start without rewiring.

According to the following steps:

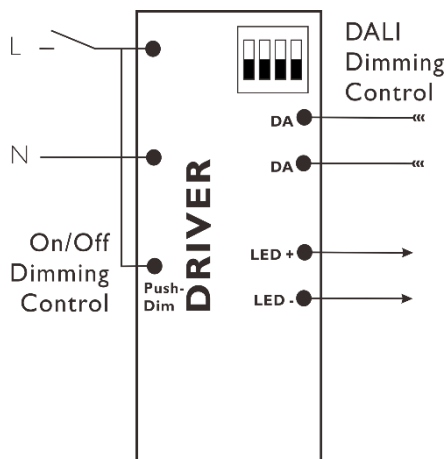

- ✧ According to the requirements of sectional dimming LED driver wiring, confirm before power ON / OFF wall switch in the ON state;
- ✧ There are 30%, 60% and 100% in three segments dimming state, dimming depends on the number of state power; it will turn cycle.

Risk of short circuit.

Push-Dim can only port L (AC) short circuit, does not allow Push-DIM port N (AC) short circuited.

##### ➤ Push-dim 0-100% dimming control

By pressing the push button for less than one second the LEDs turn on or off. By pressing the push button for more than one second the light intensity of the LEDs is dimmed according to the following modalities:

- ✧ If the light intensity is not at maximum, by pressing the key there will be an increase of this to maximum or to the corresponding level at the moment the key is released;
- ✧ A further pressure on the key inverts the dimming direction to the minimum value or to the corresponding level at the moment the key is released;
- ✧ If light intensity is at maximum by pressing the key there will be a decrease to the minimum value or to the corresponding level at the moment the key is released.

Total length of PUSH cables <20m. Factory dimming setting at 100%.

Note: Only use self-reset push button without indicator light.

Risk of short circuit. The self-reset button can only be linked between the Push-dim and the L(AC).

Do Not connect the self-reset button to the N(AC)

### SPEC SHEET

#### ➤ DALI interface dimming control

LND series of LED dimming driver, in line with DALI protocol specification IEC62386, acceptable compliance with ON / OFF, scenes and dimming DALI controller instruction norms issued.

Each DALI subnets can only have a maximum of 64 DALI slave devices (DALI LED dimming drivers).

Each DALI LED dimming drivers will consume 2mA control terminal of the current.

DALI connections of up to 300 m can be made with any 2 wire 0.5 - 1.5 mm<sup>2</sup> mains rated cable.

DALI cable must be mains-rated and the maximum voltage drop along the length of the cable must not exceed 2V.

In rare instances where the environment may be electrically noisy, due to adjacent circuits carrying high switching currents, we recommend a 2 wire twisted pair screened and sheathed cable.
